

Smart feeding with the feed pusher

Meet the Moov 2PRO

Moov 2PRO

Smart feed pushing

Switch to automatic feed pushing? With the Moov 2PRO, the latest feed pusher from JOZ, your animals have 24/7 access to fresh feed. This means less work, more calm in the barn and higher feed intake and milk production.

Always fresh feed and peace of mind in the barn

The Moov 2PRO operates fully automatically throughout the barn, continuously pushing feed towards the feed fence. This ensures that even lower-ranking cows always have access to feed. Because your livestock no longer needs to stretch to reach the feed, injuries to the withers and front claws are prevented. This improves feed intake and milk production – while you sleep without worry.

Tailored to your barn

Every barn is unique. That's why the Moov 2PRO is available in no fewer than **3 versions**:

- Standard version
- Version with skirt lifters
- Version with skirt lifters and automatic door opener

How it works

The robot departs from the charging station, which can be installed both inside and outside the barn. Thanks to transponder technology, you can easily set up unlimited routes – even for multiple animal groups. The electric stainless-steel drum with smart drive technology effortlessly pushes large quantities of feed. Thanks to its robust design, the Moov 2PRO operates both clockwise and counterclockwise, efficiently returns via the same route and reaches a speed of 12 metres per minute.

A smart lifting function

Obstacle or height difference in the barn? No problem. The drum of the Moov 2PRO can lift its skirt up to a height of 70 mm, allowing it to easily cross transitions. Slopes of up to 15% are also no challenge.

Automatically opening and closing doors

Feeding across multiple feed alleys? Or is the charging station located outside the barn? With the Door Control option, the Moov 2PRO automatically opens and closes electric doors via the J-Link PRO. The robot takes care of everything.

Planning and monitoring

The Moov adapts flexibly to any feeding schedule. Using the software, you can easily create a plan based on your routes that fits your situation.

Options include:

- **2-day planning** – For farms that feed every other day
- **Delayed start** – Feed pushing at a later moment
- **Pause/play** – Temporarily stop and resume

savings!

Via the JOZ Management System (JMS) and the J-Link PRO, 24/7 remote monitoring is possible – for both the farmer and the dealer. This means:

- ✓ Full control and insight
- ✓ Automatic software updates
- ✓ Easy adjustment of route settings
- ✓ Alerts in case of malfunctions, low battery voltage or maintenance needs

Always in control of your feeding process – wherever you are. Want to know more?

In short

- 24/7 access to fresh feed
- Higher feed intake
- Higher milk production
- Better farm performance
- More flexibility for the farmer

About JOZ

Home of the clean stable. That's what JOZ stands for. As the pioneer of modern barn cleaning, we have been developing manure removal and feed pushing systems for farmers worldwide for over 75 years.
